

Employee Resignation Prediction Using AI

Problem

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

A) How will you achieve this in AI?

B) Find out the 3 -Stage of Problem Identification

C) Name the project

D) Create the dummy Dataset.

A) How will you achieve this in AI?

We use Machine Learning to build a prediction model.

Steps:

1. Collect employee data
 2. Clean the data
 3. Find patterns in the data
 4. Train ML models
 5. Predict whether an employee will resign or not
 6. Take action early to avoid project delays
-

B) 3-Stage of Problem Identification

Stage 1

Employee suddenly resigns.

Stage 2

Work incomplete → Project delay → Client delivery delay

Stage 3

Use Machine Learning to predict employee resignation in advance.

C) Project Name

Employee Resignation Prediction Using Machine Learning

D) Dummy Dataset

Employee	Age	Salary	Job Satisfaction	Overtime	Working Hours	Promotion	Performance	Resigned
Employee1	24	35,000	4	No	40	1	4	No
Employee2	29	32,000	2	Yes	52	0	3	Yes
Employee3	35	65,000	4	No	42	2	5	No
Employee4	27	40,000	2	Yes	55	0	3	Yes
